MRRS 4101: Synoptics – ProReveal

06 October 2014

Recommendation 2: Basic research and development has been completed and the product may have potential value; in use evaluations/trials are now needed in an NHS clinical setting

This product is an imaging system for the detection of residual proteins on surgical equipment for use in the optimisation of cleaning protocols. The RRP notes that further validation is required, however this may present as a useful tool for optimising cleaning protocols.
